

# VERIEX

Essential canine nutrients  
patterned after nature.

## POWER CHOW<sup>2</sup>

Advanced rehydration and  
glycogen replacement.

## SIRUCIURE

Providing the ultimate nutritional  
profile to your puppies and  
their mothers.

AVAILABLE at:

CANINE PERFORMANCE NUTRITION

# VERTEX

You demand a lot from your dogs so the first thing that should come to mind is their nutrition. Dry dog foods are cooked at high temperatures that destroy enzymes, denature protein and pulverize the ingredients until MANY key nutrients have been rendered useless. Can dogs survive on dry feed? Yes of course. Can (some) of them even thrive and compete on dry dog food? Again yes. There are always those gifted few that no matter what they are fed they seem to thrive. They are the exception and not the rule. Even the gifted few, sooner or later, succumb to inequities of a diet of only dry food. There is a solution though. If you want world class performance from your dogs, you have to supply them with world class nutrition. Vertex is that tool. Human sports nutrition, tailored to YOUR dog's metabolism. Whether you are hoping to get that second glance from the show judge, pull another 100 lbs. or shave time off the record, Vertex has what your dogs need to achieve that. Safely! Dried egg, whey Protein, predigested poultry liver, marine oils and more. We've been helping dogs reach new levels of performance from the Iditarod to the Sieger Show and we are consistently finishing ahead of the competition. The reason is that we at CPN are competitors ourselves. We breed, show and compete with our dogs. We feel that it is the only way to keep a finger on the pulse of the real issues that face breeders and fanciers. Vertex is a food concentrate containing hundreds of nutrients, enzymes, nutraceuticals and phytochemicals that are not only natural and safe for a dog, but also have a taste that is irresistible to them. Glucosamine, chondroitin, probiotics, bromelain, papain, omega 3's and other nutrients that aid in soft tissue development and reduce inflammation. You won't believe the results. There are many supplements out there competing for you dollar, but NONE of them delivers the results that Vertex does. Take a look at our site and read about our products and decide if you are ready to take that step to find out your dog's real potential.

Available in 1,2,4,10 and 30lb. sizes

# POWER CHOW2

The way you feed during training and conditioning is not always the best for the actual competition. Power Chow2 began as a lower fat, lower protein version of Vertex. Through research and extensive hands on trials, we found that by reducing the amount of protein, maintaining adequate fat levels and increasing the amount of complex glucose polymers and certain minerals, we could greatly reduce overheating and maintain better hydration during most canine sporting events. Anyone that has competed with dogs has encountered their dog "running hot." Feeding Power Chow2 after extended periods of using Vertex, greatly reduces this problem. Running hot is caused when the body reaches for more glycogen but the levels are too low so the brain stops glycogen usage, causing a rapid drop in blood sugar levels. Power Chow2 brings those levels back up. During most sporting dog events, dogs tend to burn huge amounts of glycogen very quickly. During this Anaerobic exercise, carbohydrates and or glycogen stores are the preferred energy source for the body, due to insufficient amounts of oxygen being supplied to the cells for metabolism of fat. Glycogen is stored in muscle tissue and the organs. Power Chow2 keeps those glycogen stores full. By using the right types of fat and just the right amounts, together with certain trace minerals Power Chow2 sets the body up for fat synthesis by moderating glycogen usage and expediting fat metabolism. Large amounts of electrolytes can cause the dog's stomach to flush itself to dilute the electrolytes, thus making dehydration even worse. Power Chow2 prevents this by supplying only minute amounts of electrolytes but ample amounts of glucose polymers which enable the dog to store water in the muscle tissue along with glycogen. Power Chow2 loads your dog's body and keeps it loaded. Great for the week of competition, hot temperatures and in between sets.

Available in 2 and 4 lb. sizes

# STRUCTURE

The nutrition provided during pregnancy is the most crucial of any, for your puppies as well your brood bitch. Of the nutrition provided, we feel that the protein profile is the most crucial. Proteins control nearly all aspects of life, from the blink of an eye to the growth of a toenail. STRUCTURE provides proteins from human grade whey protein, dried egg and egg yolk. This particular combination delivers an amino acid profile that is biologically perfect for the growth of your puppies as well as the health of the brood bitch during pregnancy as well as during nursing. Breeders using STRUCTURE during whelping and nursing have reported amazing improvement, not only in the size of the pups at birth, but also increases in milk production and health and vigor of the brood bitch after whelping. When the bitch is producing more milk with a higher nutrient content, this means less stress from nursing and a faster recovery from pregnancy. Growth must be balanced so that bone is not growing faster than muscle and soft tissue. Many growth supplements promote rapid growth without balance, leaving the puppies with pano or soft tissue insufficiencies later in life. STRUCTURE provides low, balanced cal/phos ratios so that bones do not grow too fast. This, combined with rich proteins and micro nutrients like Glucosamine, Chondroitin, Vit C,E and chelated minerals, mean muscle and soft tissue is developing as quickly as bone, helping to overcome pano and helping with joint development. STRUCTURE is nearly 100% digestible and reinforces any feeding program with as little as 1 teaspoon per puppy. Brood bitches have shown to have to have excellent results with one tablespoon per 20lbs. Start feeding STUCTURE today and start raising better litters

Available in 2, 4, 10 and 30 lb. sizes.
